

## Investing Strategy

To identify undervalued companies exhibiting strong financial attributes and proven market resilience within trending sectors, bolstered by robust market sentiment. Then, leveraging our market timing and risk management technology, optimise entry and exit points while effectively mitigating risk.

## Objective

Strive to attain risk-adjusted returns in the near term through our active stock ratings, while minimizing the risk of capital loss.

Our objective is to achieve an average return of 4% on each stock rating generated throughout the economic cycle.

## Investing Risk

Jaaims relies on the stock market to generate returns and operates as a long-only trading tool. Therefore, returns are not guaranteed, and users should be mindful of the associated risks and factors influencing performance. Investing inherently carries risks. While it's impossible to anticipate every risk, we have outlined detailed information about potential risks on our website and within this report.<sup>[1]</sup>

## Performance Summary<sup>[19]</sup>

Global equity markets rallied in Q2, buoyed by Federal Reserve commentary suggesting a lower likelihood of interest rate hikes. Economic data for the quarter was relatively weak, with the US unemployment rate increasing to 3.9% and annual core inflation decreasing to 3.6%. The Federal Reserve maintained steady interest rates, while the European Central Bank (ECB) became the first major central bank to implement a rate cut. Meanwhile, in Australia, quarterly GDP growth fell to its lowest level since COVID-19, recording 0.1% for the March quarter. Additionally, inflation appears to be rising again, making a rate increase likely in August.

Jaaims' performance over the quarter was neutral. The average portfolio return recorded a loss of 0.07%, primarily due to the repositioning of clients' portfolios to a defensive stance in Australian equities while maintaining exposure to key AI growth stocks in the US. Our top-performing client achieved a return of 9.26%, down 2.78% from the previous quarter's top performer, while the lowest performer experienced a loss of 2.63%, reflecting variations in trade parameters set by our clients. Strong performers for the quarter included Apple (AAPL) at +23.87%, Rolute Mining Ltd (RSG) at +19.32%, and Google (GOOG) at +17.20%. Conversely, Celanese Corporation (CE) at -21.18%, Iluka Resources Limited (ILU) at -19.77%, and Host Hotels & Resorts Inc (HST) at -15.45% underperformed. Celanese Corporation was impacted by Force Majeure for specific chemicals and weaker market demand. However, we retain our buy rating, anticipating a recovery in demand to mid-cycle dynamics.

[1] Investing inherently carries risks. Jaaims relies on the stock markets to generate returns and operates as a long-only trading tool. Therefore, returns are not guaranteed, and it's important to be aware of the following risks and other factors that can affect performance.

**Investment Risk** Share markets carry a risk of loss and do not always go up. As Jaaims is a long only strategy (i.e. it does not offer short selling) it can only make a profit if stocks go up in price during the trade period. Jaaims seeks to manage investment risk by actively trading and updating recommendations every 15 minutes. The app may also retain high levels of cash where it does not see trades having a high likelihood of success which may serve to reduce losses that might occur if you were fully invested (e.g. via products such as managed funds or exchange traded funds).

**Execution Risk** There is a risk Jaaims will not be able to execute trades in a timely manner due to connection issues with your broker. We manage this risk by actively working through any issues with our connected brokers.

**Concentration Risk** Users can select their preferred position size. Having a large position size relative to funds invested will mean a lower number of trades and may result in higher volatility. In general, we recommend a maximum position size of 5% of your portfolio but Jaaims gives you the ability to tailor your trading strategy to your own individual needs.

**Stock Selection** Performance for each individual user will depend on the stocks you select for Jaaims to trade, the position size, the currency of your trading account and the markets you choose to invest in.

**Broker selection** Your choice of broker will affect your performance after costs. As Jaaims trades shares on international stock markets you should be aware of brokerage as well as foreign exchange costs.

**General advice** Any advice provided is general in nature and does not take into account your specific needs and circumstances. You should consider your own financial position, objectives and requirements to determine the type of advice and products to best suit your needs.

[2] "Top 5 Holdings" lists the five most stocks held by our clients as of the report date. The percentage shown represents the mark-to-market (MTM) result of the rating in the base currency of each stock.

[3] The performance data displayed in this table is calculated based on the absolute return of our stock ratings on a MTM basis. Detailed quarter rating results are provided on page 3 of this report.

[4] "Buy Ratings" refers to the newly generated buy ratings within the specified period.

[5] "Highest Performing Rating" refers to the stock identified as a buy by the AI that demonstrated the strongest performance over the specified period.

[6] "Lowest Performing Rating" refers to the stock identified as a buy by the AI that demonstrated the weakest performance over the specified period.

[7] "Avg Return Per Rating" denotes the average profit return percentage of all realised buy ratings provided by the AI over the specified period.

[8] "Success Rate" is calculated by dividing the total number of realised ratings with a positive return by the total number of realised Buy Ratings.

[9] "Avg Days Held" is calculated by averaging the total number of days each rating is held from the date the stock became a buy rating up until the day the rating was closed or the end of the quarter reporting cycle.

[10] "Concentration" represents the percentage distribution of buy ratings by country.

[11] The Client Performance data displayed in this table summarises the results achieved by our clients over the specified period. The results shown are in AUD and are net of fees, including brokerage and foreign exchange, but do not include the Jaaims service fees. Our clients' results vary due to several factors, including differences in trade parameters, the timing of portfolio activation and position sizing, among other factors.

[12] "Avg Portfolio Return" is calculated by averaging the total percentage return of clients over the specified period. However, it's important to note that this metric may not be a reliable benchmark compared to an index or managed fund, as it does not adjust for client deposits and withdrawals, nor does it consider the timing of portfolio activation by clients.

[13] "Median Portfolio Return" is calculated by determining the midpoint of all client results.

[14] "Range Portfolio Return" is calculated by determining the difference between the highest and lowest returning client portfolios during the specified period.

[15] "Highest Portfolio Return" represents the maximum return achieved by a client within the specified period.

[16] "Lowest Portfolio Return" represents the minimum return achieved by a client within the specified period.

[17] "Avg Funds Per Client" is calculated by dividing the total funds under advice (FUA) by the total number of clients.

[18] "Funds Deployment Rate" is calculated by dividing the total amount of funds deployed by Jaaims by the total funds under advice (FUA).

[19] "Performance Summary" is a summarised analysis of the quarter provided by an analyst at Jaaims.

#### Important Information

Past performance is not necessarily indicative of future results. We do not guarantee the future performance of the service, the amount or timing of any return from it, or that asset allocations will be met, that it will be able to implement its investment strategy, or that its investment objectives will be achieved. Statements contained in this material that are not historical facts are based on current expectations, estimates, projections, opinions, and beliefs of Jaaims or the third party responsible for making those statements (as relevant). Such statements involve known and unknown risks, uncertainties, and other factors, and undue reliance should not be placed on them. This material may contain "forward-looking statements." Actual events or results or the actual performance of Jaaims services may differ materially from those reflected or contemplated in such forward-looking statements. This material may include data, research, and other information from third-party sources. Jaaims makes no guarantee that such information is accurate, complete, or timely and does not provide any warranties regarding results obtained from its use. No representation or warranty is made with respect to the accuracy or completeness of any of the information contained in this material. Jaaims will not be responsible or liable for any losses arising from your use or reliance on any part of the information contained in this material.

#### About Jaaims

Jaaims provides unbiased, data-driven stock recommendations through advanced artificial intelligence (AI) technology, offering a range of specialised portfolios accessible via our online investing applications. Tailored for investors seeking direct control over stock ownership rather than a managed fund, Jaaims' active AI simplifies the investing process from market

analysis to trade execution, with parameters set and managed by users.

With Jaaims, investors gain greater control over their investment decisions, confident that all actions are guided by the portfolio's strategy without human bias or intervention. Our accounts feature Advanced Encryption Standard (AES) security, and trade execution is facilitated through our trusted, well-capitalised broker partners. Furthermore, investments are exclusively made in highly liquid assets, ensuring quick exit from positions and prompt access to funds after settlement.
